Module-2

Practical No. III

Roll No.: 52	Name: Divyanjali Yadav
Class: TYIT	Batch:
Date of Assignment: 02/09/2026	Date/Time of Submission: 02/09/2026

A. Create and configure Issue Types (Epic, Story, Task, Bug)

Step 1: Open the FSP Board

Process: 1. Open Jira.

2. Open the FSP (Full Stack Project) board.

3. You will see a Kanban Board.

4. The board contains different columns:

- o Backlog
- o Selected for Development
- o In Progress
- o Done

Explanation:

A Kanban board is used to visually show the work of a project. It tells us whether a task is waiting, selected, currently being worked on, or completed.

Step 2: Go to Backlog

Process: 1. Open the Backlog column.

2. Click Create.

3. A new issue card will appear.

4. You will see the field "What needs to be done?"

Explanation:

The Backlog contains work that has not been completed yet. The Create option is used to add a new work item to the project.

Step 3: Enter the Work Name

Process: 1. Click inside "What needs to be done?"

2. Enter the name of your work.

3. Example:

Team Interaction

Explanation:

This name tells us what activity or work needs to be performed.

Step 4: Select Issue Type

Process: 1. Click the Issue Type icon/drop-down on the issue card.

2. You will see different issue types.

3. Select the appropriate type.

The practical shows:

- Epic
- Task
- Bug

Explanation:

• Epic: A large body of work.

• Task: A specific piece of work.

- Bug: A problem or defect in the project.

Step 5: Create a Task

Process: 1. Select Task from the issue-type list.

2. Enter the task name.

3. Example:

Team Interaction

4. Click Create/Enter.

The task will appear as a card in the Backlog.

Explanation:

A Task is used for a normal activity that needs to be completed in the project.

Step 6: Create a Bug

Process: 1. Create another issue.

2. Click the Issue Type option.

3. Select Bug.

4. Enter the bug name.

Example: Fix Homepage

5. Click Create/Enter.

The bug will appear with the Bug issue type/icon.

Explanation: A Bug is used to record a problem or error that needs to be fixed.

B. Create Components and Versions.

Part 1: Create a Release/Version

Step 1: Open Space Settings

Process: 1. Open your project.

2. Go to Space Settings.

This is where you can manage project-related settings.

Step 2: Create Release

Process: 1. Click Create Release.

2. Enter the required details.

3. Click Save.

Explanation:

A Release/Version is used to identify a particular version or release of the project.

Step 3: Check the Version List

Process: 1. After saving the release, open the Version section.

2. Check the Version List.

3. Your newly created version will appear there.

Explanation:

The Version List shows the releases/versions that have been created for the project.

Part 2: Create Components

Step 1: Open Components

Process: 1. Go to the project settings.

2. Click Components.

3. Click Create Components.

Explanation:

Components are used to divide a project into different parts or modules.

Step 2: Enter Component Details

Process: 1. Enter the required component details.

2. Click Save.

Explanation:

Saving the details creates the component in the project.

Step 3: Check Component List

Process: 1. After saving, open the Components section.

2. Check the Component List.

3. Your newly created component will appear in the list.

Explanation:

The Component List displays all the components created for the project.

The image displays three screenshots of the Jira interface, specifically the 'Space settings' page for a 'Full Stack Project'.
