### Jira Automation

A. Create an Automation Rule (Trigger → Condition → Action).

B. Configure rule (e.g., When issue is moved to Done → send email / auto-assign).

- Open the required Jira project and go to **Project Settings** → **Automation**.
- Click on **Create rule** to create a new automation rule.
- Select **Issue transitioned** as the trigger and choose **Done** as the required status.
- Add a suitable **Condition**, such as checking the issue type or priority, if required.
- Select an **Action**, such as **Send email** to a user or **Assign issue** to a particular user, and configure its details.
- Give the rule a suitable name, review the complete **Trigger → Condition → Action** workflow, and save the automation rule.

### C. Test and enable automation rules.

- Create or select a test issue in the Jira project.
- Move the issue to **Done** so that the configured trigger is activated.
- Check whether the selected action, such as email notification or automatic assignment, is performed correctly.
- If the test is successful, enable the automation rule and verify that its status is **Active**.
